

“ ECASB BUSINESS CONNECTIONS ”**BUFFALO
ENGINEERING, P.C.**
*Mechanical - Electrical - Energy Engineers***Celebrating 30 years of
Engineering Excellence**

Founded in 1990, Buffalo Engineering provides design and construction administration services to governmental/municipal, educational, institutional, health care, housing and commercial clients. They have an extensive and diverse client base throughout New York State and the northeast. They point with pride to their strong partnerships and longstanding relationships with clients, a number of whom have been with the firm since its founding. On a yearly basis over 80% of their work is with repeat clients, and referrals are a significant portion of their new business.

Buffalo Engineering combines MEP consulting engineering services with specialized energy engineering, renewable energy and commissioning expertise. This results in a “whole building” approach that considers how facility systems can work together most efficiently. Their continuum of services facilitates successful, energy efficient projects that are completed in a seamless, time-efficient and cost-effective manner.

They emphasize client satisfaction and project value from the original kickoff meeting through the punch-list process. They are dedicated to meeting the most exacting standards in working for their clients...with client satisfaction as a key measure of their success.
